

400-core optical fiber communication cable

AI Overview

400-core optical fiber cables are high-density multi-fiber cables designed for ultra-high-speed data transmission, supporting 400G and beyond in data centers and telecom networks.

Overview A 400-core optical fiber cable is a high-density fiber optic cable that integrates hundreds of individual fibers within a single jacket, enabling massive parallel data transmission. These cables are primarily used in data centers, hyperscale networks, and high-performance computing environments where large bandwidth and low latency are critical. They support both single-mode (SMF) and multimode (MMF) fibers, depending on the application distance and transceiver type.

Fiber Types and Specifications

- Multimode Fiber (MMF):** Typically 50/125 μm OM4 or OM3 fibers, suitable for short-range 400G applications up to 100 meters. Duplex or parallel configurations are common, often using CS or LC connectors for QSFP-DD or OSFP transceivers.
- Single-Mode Fiber (SMF):** Used for longer distances, supporting 400GBASE-LR4 or 400GBASE-FR4 standards with duplex LC connectors. SMF can reach up to 10 km or more depending on the transceiver and wavelength multiplexing.

Connector Types

- MTP®/MPO Connectors:** High-density multi-fiber connectors that can accommodate 8, 12, 16, or more fibers per connector. They allow parallel transmission and are widely used for 400G and 800G networks. MTP/MPO cables can be configured for direct 400G-DR4 connections, 400G-SR8, or breakout to multiple 100G links.
- CS Connectors:** Compact connectors designed for high-density QSFP-DD transceivers, reducing space requirements in patch panels and switches.

Deployment Scenarios

- Parallel Patch Cables:** Connect 400G transceivers directly using 8- or 12-fiber MTP/MPO cables for short-range links.
- Breakout Cables:** Convert a 400G link into multiple 100G links using 16-fiber MTP/MPO cables or 8-fiber to 4-fiber...

Buy Cables Online | Your Reliable Partner for Cable

LAPP India, a one stop solution provider for cable and connection technology. Buy online over 40,000 products ranging from cables, connectors, glands, conduits to

Know Your 400G Transceiver | Juniper Networks

A 400G transceiver uses multiple lanes of optical signals and advanced modulation techniques to achieve higher capacities. 400G transceivers can employ multiplexing using multiple fibers, parallel

Optical Fibers & OEM Fiber Assemblies | CeramOptec

Optical fibers & OEM fiber assemblies – precisely manufactured for laser technology, industry, medical applications & research.

Know Your 400G Transceiver | Juniper Networks

Fiber type and reach—The fiber type specifies the type of optical fiber (single-mode or multimode) compatible with 400G transceivers. The reach provides the maximum supported distance or range

Corning® ALTOS® Loose Tube Fiber Optic Cables

Corning ALTOS® cables provide stable performance over a wide temperature range and are compatible with any telecommunications-grade optical fiber.

How does fiber optics work?

An easy-to-understand introduction to fiber optics (fibre optics), the different kinds of fiber optic cables, and how light travels down them.
