

8km using a 10km optical module

Overview

Yes, you can use the 800GBASE-PLR8 to transmit 8km, as the max transmission distance is 10km of this module. This is why two modules with the same form factor can have dramatically different ranges—some limited. When choosing the right transceiver for extended reach, understanding optical characteristics, transmission distances, and fiber type compatibility is critical. This guide provides a comprehensive breakdown to help network professionals, IT architects, and procurement teams make informed decisions. Anyone who works with 10G SFP+ transceivers knows that the achievable distance depends on far more factors than just the module used. The fiber optic length, connector quality, cleanliness, and proper handling often determine whether a connection is stable or problematic. Supporting data rates up to 10.
