AI Overview

Distribution boxes in Barbados are installed by licensed electricians to safely manage electrical circuits for residential, commercial, and industrial properties, ensuring compliance with local codes and optimal system performance.

Overview of Distribution Boxes A distribution box (also called an electrical panel or breaker panel) is a metal or PVC enclosure that houses circuit breakers or fuses. It distributes electricity from the main supply to various circuits in a building, protecting wiring and appliances from overloads or short circuits. In Barbados, distribution boxes are essential for both residential and commercial installations, and they come in various types including LT Distribution Panels, Load Management Panels, Outdoor Power Panels, and Power Control Panels.

- Specialized:** Solar power systems, smart home automation, and security systems may require custom distribution boxes or integration with existing panels.
- Temporary:** For events or construction sites, portable distribution boxes are used to safely manage temporary power setups.
