

Broadband replaced with fiber optic cable

Overview

Fibre-based broadband is the new generation of broadband - much faster, more reliable and it uses a different technology. Whilst traditional broadband is delivered via copper telephone lines, fibre-based broadband incorporates fibre optic cable in the link between the customer and the provider. The “copper switch off” is the replacement of the UK's copper landline infrastructure with fibre optic cable. This means a more reliable and cheaper alternative to landline by implementing phone calls into your broadband service—aptly named Voice over Internet Protocol (VoIP). Here's a quick breakdown of how the two technologies differ: What Is Copper Broadband and Why Is It Being Replaced?

By 2027, several countries worldwide will switch. Discover how 2026 data reveals a significant internet shift, favoring fiber optics over traditional cable. The. Copper internet infrastructure is being replaced. Copper has supported the UK's telephone services since 1911, as well as broadband connections since the introduction of ADSL. As part of the transition, telephone and Internet providers will retire aging copper-line networks used to provide voice services in areas where modern fiber, satellite, and wireless services are available as a replacement for both Internet and voice services.
