

Cable tray color settings

AI Overview

You can set the color of cable trays in Revit by applying materials, adjusting Object Styles, using view filters, or employing Dynamo scripts for parameter-based color coding.

Using Object Styles and Materials

Select the Cable Tray: In a 2D or 3D view, click on the cable tray to select it. A bounding box will appear around the element.

Open Object Styles: Go to the Manage tab → Object Styles → Model Objects tab. Locate the Cable Tray category.

Assign a Material: Click the color box next to the cable tray entry to open the color selection dialog. You can choose a predefined color or define a custom RGB/HEX value. This change affects all cable trays in the project.

Confirm Changes: Click Apply or OK to save the changes. The cable trays will now display the selected color in all views where Object Styles are applied.

Using View Filters for Specific Color Coding

Create a Filter: Go to the View tab → Filters → Edit/New. Define a filter based on parameters such as Type, Service Type, Size, or Elevation.

Apply the Filter to a View: In the Visibility/Graphics (VG) dialog, add the filter to the view. Set the Surface Pattern to Solid Fill and choose the desired color.

Multiple Colors: You can create multiple filters to assign different colors to different cable tray types or services, allowing visual differentiation in the same view.

Using Dynamo Scripts for Automated Color Coding

Dynamo scripts can automatically color code cable trays based on parameters like Type, Service Type, Size, Width, or Height. The script performs a view override and can generate a legend showing which color corresponds to each parameter value.

Always back up your project before running scripts to avoid unintended changes.

Export Considerations

When exporting to Navisworks, ensure that the cable trays have assigned materials, as Navisworks recognizes materials rather than filters or system overrides. You can also create selection sets in Navisworks to apply color overrides if needed.

By combining Object Styles, materials, filters, and scripts, you can achieve both project-wide and view-sp...

Standard Support Construction Of The Cable Tray RS With the RS 60 cable tray installation system, we offer you the last installation type of the standard support

How to Change Color of Cable Tray in Revit?

Changing the color of a cable tray in Revit requires a systematic approach to modify the appearance of the element within the project. Below are detailed steps to adjust the color settings effectively.

Solved: Re: Cable Tray Colors

You would need to assign a material to the cable tray or create a selection set in Navisworks. Navisworks only looks for materials, not filters or system overrides.

Solved: Re: Cable tray colour

You can do this with filters. You can either make a different cable tray type for each service, or add parameter that will allow you to define what service the tray is carrying. Then you can

FRP Perforated Cable Tray Specifications
