

Cable trays first then pipes

Overview

Cable trays should not be installed parallel below pipelines transporting corrosive liquids or above pipelines transporting corrosive gases.) as much as possible, in close coordination with civil construction. When cable trays are installed together with process pipe racks, the cable trays should be arranged on one side of the pipe. Cable trays and pipes serve as the backbone of electrical and fluid transportation systems in both residential and industrial environments. Cable trays and pipes work together to manage the flow of electricity, fluids, and gases, with cable trays primarily supporting electrical cables, and pipes. Cable trays have been a smart solution to various issues faced with traditional wiring systems. From the scope of tray-laying, it can be divided into work area trays, distribution. Conduit systems are enclosed pipes that require precise bends, threading, and pulling.
