

Connect the cable tray tee to a larger cable tray size 1

Overview

Always use 2 splice plates per length of tray and SBH and CNH splice nuts and bolts to fasten them in place. EzyStrut splice bolts have a smooth head which should be installed on the inside of the tray's side wall. The SBH's smooth head is specially designed so it cannot damage. This guide explains the different types of cable tray tees, their applications, support requirements, load considerations, and installation best practices. Choosing the right one depends on project conditions, load. More clarity, easy selection: These are the standardised fittings for all OBO cable trays. These systems have 1-1/8" wide side rail flanges and 4-hole splice plates. ▲ Class 2 Tray Fittings are designed for use with NEMA Class 20A, 20B, and 20C Cable Trays. I would like to adjust the "Type properties -> Fittings -> Tee" with the branch family, but can't get it accomplished.
