

Distribution box sbp

AI Overview

The SBP distribution box is a compact, modular electrical distribution unit with built-in fuses, power switches, and alarm indicators for safe and efficient circuit management.

OverviewThe SBP series distribution box by Daiichi Electronics is designed to safely distribute electrical power across multiple circuits while providing protection and monitoring features. Each circuit in the SBP box includes a built-in power switch and fuse, allowing individual control and protection of connected devices. When a fuse blows, the system outputs an alarm contact (1a parallel contact) and visually indicates the fault through a white indicator in the fuse hole, enabling quick identification and replacement without opening the enclosure.

Key Features

- Compact Design:** The SBP series reduces weight by approximately 70% and mounting space by 30% compared to previous models, making it suitable for space-constrained installations.
- Fuse Protection:** Each circuit is protected by a replaceable fuse, ensuring safety against overloads and short circuits.
- Alarm System:** The built-in alarm contact provides remote signaling when a fuse is blown, enhancing monitoring and maintenance efficiency.
- Modular and Flexible:** The SBP distribution box can be integrated into various industrial and electrical setups, supporting decentralized power distribution.
- Durable Construction:** Typically made from high-quality thermoplastics or coated metals, ensuring robustness and long-term reliability.

ApplicationsThe SBP distribution box is widely used in industrial automation, machinery, and electrical panels where multiple circuits need safe and organized power distribution. Its compact size and modularity make it ideal for control panels, factory automation systems, and decentralized power networks. The visual and alarm indicators simplify maintenance and reduce downtime in critical operations.

Advantages

- Safety:** Protects circuits from overloads and short circuits.
- Ease of Maintenance:** External fuse replacement and visual indicators reduce service time.
