

Electricity meter and distribution box processing price

AI Overview

The cost of electricity meters and distribution boxes varies widely, with residential meter boxes typically ranging from \$600–\$2,000 and distribution boxes from \$100–\$1,500+, depending on specifications and installation requirements.

Electrical Meter Box Costs Residential installations of electrical meter boxes generally cost \$600 to \$2,000, with most projects falling between \$1,000 and \$1,400. Higher-capacity units, such as 200A or outdoor/weatherproof boxes, are at the upper end of this range due to larger conductors, heavier-duty sockets, and weatherproof enclosures. Industrial or custom enclosures can cost \$2,500 to \$12,000+, depending on service size, materials (stainless steel, fiberglass), and integrated features like CT compartments or revenue-grade metering systems. Costs also include labor, permits, inspections, and utility coordination to ensure compliance with electrical codes and safe operation.

Distribution Box Costs Distribution boxes serve as central hubs for power distribution, housing circuit breakers, fuses, and switches. Residential units typically range from \$100 to \$1,500, depending on voltage rating, amperage capacity, number of circuits, and material construction. Commercial and industrial boxes are more expensive due to higher durability, larger capacity, and advanced features such as smart monitoring or remote control. Outdoor-rated or weather-resistant enclosures carry premium pricing, and customization options like specialized mounting or integration with building management systems can further increase costs.

Factors Affecting Prices

- Amperage and Capacity:** Higher amperage systems require larger enclosures and thicker conductors, increasing material and labor costs.
- Material and Construction:** Metal, galvanized steel, or aluminum enclosures differ in durability, corrosion resistance, and cost.
- Installation Complexity...**
