

Fiber optic cable across Africa

AI Overview

Fibre optic cables across Africa are rapidly expanding, significantly enhancing connectivity and internet capacity. As of 2024, over 15 submarine cables encircle Africa, including projects like Google's Equiano and Meta's 2Africa, which add thousands of terabits of capacity. Undersea cables such as SEACOM and EASSy link Africa to the global internet, driving fibre expansion in countries like Kenya, Nigeria, and South Africa. Investments in both terrestrial and submarine cables are helping to bridge the digital divide and foster economic growth across the continent. Terrestrial fibre optic cables extend connectivity to landlocked countries and urban centers, complementing the undersea infrastructure. The WIOCC's regional fibre optic network reached 75,000 km in 2024, showcasing the extensive reach of fibre infrastructure in Africa.
