

Fiber optic module wiring

Overview

This article guides readers through setting up a fiber optic communication system, detailing required hardware and wiring instructions for effective data transmission using UART transceiver modules and single-mode fiber optics. Was this article helpful?

The fiber network module multi-mode (MM) and the fiber network module single-mode (SM) can be used for the exclusive purpose of networking fire detection panels to the HNET, XNET, SNC, or HUB-4 over large distances using fiber-optic cable. It is imperative that certain procedures be followed in the handling of these cables to avoid damage and/or limiting their usefulness. 1 available from your local Rockwell Automation® sales office or online at com.literature/) describes some important differences between solid-state equipment. The SK-FML is a fiber module that is used as one channel to transmit or receive communications with the ECS-NVCM (Network Voice Control Module) or SK-NIC (Network Interface Card). It allows the multi-mode fiber to network between the SK-FML module boards.
