

# How much is a 1 8-meter network server rack

## AI Overview

A standard 1.8-meter (42U) network server rack typically costs between \$200 and \$800, depending on features and design. Overview A 1.8-meter rack corresponds to a 42U height, which is the most common full-height server rack used in data centers and IT rooms. These racks usually follow the 19-inch width standard and come in various depths, typically ranging from 600 mm to 1200 mm, depending on the equipment you plan to install. Depth, material, and additional features significantly influence the price.

**Price Factors**

- Rack Type:** Open-frame racks are generally cheaper (\$200–\$400), while enclosed racks with doors, side panels, and lockable access cost more (\$400–\$800 or higher).
- Material and Build Quality:** Steel or reinforced racks designed for heavy servers or UPS units are more expensive.
- Depth and Load Capacity:** Deeper racks (1000–1200 mm) and those rated for heavy equipment increase the cost.
- Additional Features:** Cable management, airflow panels, cooling options, and security locks can add \$50–\$200 to the base price.

**Retail Options**

Newegg and Amazon offer a wide range of 42U server racks, including wall-mount and floor-standing models, with prices starting around \$200 for basic open-frame racks and up to \$800 for premium enclosed cabinets. Specialized suppliers like Server Racks Online provide configurable racks with adjustable depth, secure access, and advanced airflow management, which may cost more depending on customization.

**Recommendation**

For a typical networking or light server setup, a 42U enclosed rack with 1000 mm depth is a safe choice, balancing capacity, airflow, and future expansion. Expect to pay \$300–\$600 for a reliable mid-range model suitable for most small-to-medium IT environments.
