

How to create an aggregation group on a switch

Overview

Learn how to configure a Cisco Switch Link Aggregation using the command-line, by following this simple step-by-step tutorial, you will be able to create a new Link aggregation and configure the link aggregation in access mode or as a trunk that allows the traffic of. Learn how to configure a Cisco Switch Link Aggregation using the command-line, by following this simple step-by-step tutorial, you will be able to create a new Link aggregation and configure the link aggregation in access mode or as a trunk that allows the traffic of. Port aggregation allows you to group multiple physical ports into one unit. Port aggregation is useful for implementing load balancing and provides a redundant link backup. The following list details the basic. In this tutorial, we are going to show you all the steps required to configure a link aggregation on a Cisco Switch 2960 or 3750 using the command-line. Don't forget to subscribe to our youtube channel named FKIT. Traffic load balancing over the active member ports of a LAG is managed by a hash-based distribution function. The following procedure describes how to add a link aggregation group on the switch: Click the Devices () tile on the Instant On web application home page or click Devices from the navigation pane on the left. The Device Overview page is displayed. Here's. An aggregate interface group uses IEEE 802.1AX link aggregation to combine multiple Ethernet interfaces into a single virtual interface that connects the firewall to another network device or firewall.
