

How to wire a multi-circuit lighting distribution box

Overview

A complete UK guide to wiring a domestic lighting circuit from the consumer unit — cable sizing, MCB selection, loop-in method, junction box method, switch drops, two-way switching, and how many lights a circuit can supply. Understanding how household circuits manage current flow and interrupt power is necessary. Proper configuration prevents circuit overload and. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. It includes isolator, RCCB (Residual current circuit breaker) or RCD (Residual-current device) devices, protective fuses or MCB's (Miniature Circuit Breaker). Wiring multiple light switches on a single circuit is a common task in residential electrical work, allowing for centralized control of multiple lighting fixtures. The process involves distributing continuous power to each switch location and then using each switch to interrupt the flow to its. Each junction box distributes the circuit supply to a fitting and a switch. Use 30 A four-terminal junction boxes (also called 30 A round junction boxes) for lighting circuits. All the electrical sub circuits are originated from a Distribution Board.
