

Huijue Distribution Box Multi-Circuit Identification

AI Overview

Huijue distribution boxes, such as the HJ-501, support multi-circuit identification through modular design, labeled breakers, and customizable configurations for safe and organized power distribution.

Overview of Huijue Distribution Boxes

The Huijue HJ-501 Low Voltage Electrical Distribution Box is designed for efficient and reliable power management in residential, commercial, and industrial environments. It is constructed from high-quality stainless steel or cold-rolled steel, providing durability, corrosion resistance, and long service life, suitable for both indoor and outdoor installations. The box supports multiple voltage ratings (12V to 240V) and current capacities up to 100A, making it versatile for various low-voltage applications.

Multi-Circuit Identification Features

Modular Circuit Layout: The HJ-501 allows for flexible configuration of multiple circuits. Each circuit can be assigned a dedicated breaker or switch, enabling clear separation and control of different electrical loads.

Labeled Breakers and Terminals: Circuits within the distribution box can be labeled for easy identification. This ensures that maintenance personnel or users can quickly locate and manage individual circuits, reducing the risk of errors during operation or troubleshooting.

Customizable Configurations: Huijue distribution boxes can be tailored in terms of dimensions, number of circuits, and internal layout. This customization allows for precise alignment with project requirements, including the number of circuits and their respective functions.

Safety and Protection: Each circuit is protected against overloads and short circuits, ensuring safe operation. The high protection level (IP-rated) allows for secure use in outdoor environments, while compliance with CCC, CE, and ISO9001 standards guarantees quality and safety.

Installation and Management Tips

Wall-Mount or Free-Standing: The HJ-501 can be i...
