

Micromodular hot and cold aisle design

Overview

Intelligent hot/cold aisle containment with fully enclosed design, combined with dual-source air conditioning and anti-condensation systems to effectively handle high-temperature, high-density scenarios. Through standardized modular design, intelligent temperature control systems, and localized construction techniques, this solution achieves rapid deployment, efficient operation, and green energy savings.

High-density cooling challenge: Address the high heat output from Weihai data centers, AI/GPU. While advanced cooling systems like chilled water plants and CRAH units play a major role, one of the most effective strategies is much simpler: controlling how air moves through the data hall. Hot aisle and cold aisle containment are foundational concepts in data center design.

· Featuring efficient, reliable modular power gear, its standardized design with versatile components is factory-prefabricated.
