

New CWDM Module

Overview

The CWDM MUX combines multiple wavelengths into one fiber using CWDM SFP and a network switch, while the CWDM DEMUX splits the single fiber into eight different wavelengths. This creates a seamless and efficient network that delivers high-speed communication across vast distances. Wavelength Division Multiplexing (WDMs) and de-multiplexers combine multiple signals for transport on a single fiber, and separate combined signals for distribution to multiple destinations—increasing the bandwidth available on your existing fiber. They can be applied in core and metro networks. Mit den passiven Modulen von Coherent dank geringer Einfügedämpfung und hoher Nachbarkanalisation effiziente Mux- und Demux-Funktionen einrichten. Unsere Mux/Demux-Module sind robust, wirtschaftlich und hochgradig temperaturstabil. Sie sind auf kaskadierten Freiraum-Dünnschichtfiltern. Cisco Coarse Wave Division Multiplexing (CWDM) Solution allows scalable and easy-to-deploy Gigabit Ethernet (GbE) and Fibre Channel services. The product set helps enable the flexible.
