

ONU Optical Module Principle

Overview

Key components of an OLT include a rack, a Control and Switch Module (CSM), an EPON Link Module (ELM or PON Card), and power modules. The ONU transforms the optical signal transmitted through the fiber into electrical signals, which then distribute to each subscriber. orchestration of OLT (Optical Line Terminal) and ONU (Optical Network Unit) optical modules in networking is fundamental to the efficient and reliable operation of fiber-optic communication systems. This article will provide a detailed explanation of the working principles of ONUs and their. The Passive Optical Network (PON) is the indispensable foundation for delivering ubiquitous, multi-gigabit broadband connectivity, a necessity for modern economies and residential life. In contrast to an active optical network.
