## Overview

Using state-of-the-art micro-optic design and MEMS tuning technology, the UX400 OSA module measures all key optical parameters with simplicity, accuracy and robustness. High reliability is achieved through a rugged mechanical design with no moving parts that does not require. The optical module serves as a crucial component in optical fiber communication systems, operating at the physical layer, which is the lowest layer in the OSI model. Its primary function is to achieve optoelectronic conversion by converting electrical signals into optical signals and vice versa. Optical modules typically have an electrical interface on the side that connects to the inside of the system and an optical interface on the side that connects to the outside. The UX-5 exposure system from Ushio Inc shrinks into a compact footprint for labs and small semiconductor lines yet still handles critical mask alignment. This specialist tool keeps the price of Ushio shares in focus (ISIN JP3156400008).
