

Price of 45-degree vertical cable tray bends

AI Overview

The price of 45-degree vertical cable tray bends varies depending on material, size, and supplier, typically requiring direct inquiry for exact costs.

Material and Type Considerations 45-degree vertical bends are available in hot-dipped galvanized steel, aluminum, and medium-duty steel. For example, heavy-duty 300mm HDG steel bends provide durability and corrosion resistance for industrial installations, while copper-free aluminum bends offer excellent corrosion resistance and are suitable for chemical, marine, or outdoor environments. Medium-duty steel bends are also available with built-in couplers for simpler installations.

Size and Compatibility The cost is influenced by the width and radius of the bend. Common widths include 24 inches (600mm) for ladder-type aluminum bends and 300mm for heavy-duty steel bends. Compatibility with existing tray systems, such as Unitrunk or ladder-type trays, may also affect pricing.

Supplier and Ordering Suppliers like DirectChannel UK, ReflowX, and Channel & Tray offer these bends, often with fast dispatch for stocked items. Bulk orders, custom sizes, or special finishes may increase the price. For accurate pricing, it is recommended to contact the supplier directly via phone or email, as listed on their websites.

Summary While exact prices are not publicly listed, expect variations based on material, size, and duty rating. Heavy-duty HDG steel and aluminum bends are generally more expensive than medium-duty steel. For planning purposes, contacting suppliers such as DirectChannel UK, ReflowX, or Channel & Tray will provide current pricing, lead times, and trade discounts.
