

Price of Optical Module 1310

AI Overview

A 1310nm optical module typically costs between \$20 and \$150, depending on speed, distance, and brand.

Price Overview

The cost of a 1310nm optical module varies based on several factors:

- Data Rate:** Modules supporting 1G or 10G Ethernet are generally less expensive, while 25G or 100G modules cost more. For example, a 10G SFP+ 1310nm module for 10 km single-mode fiber usually ranges from \$40 to \$80.
- Transmission Distance:** Standard 10 km modules are cheaper, whereas extended-range modules (20–40 km) can cost \$80–\$150.
- Module Type:** SFP, SFP+, and DFB laser modules differ in price. Directly modulated DFB lasers for 4–5 Gb/s links are cost-effective but may still be slightly higher than basic SFP modules.
- Brand and Compatibility:** Modules compatible with Cisco, Huawei, Juniper, or other enterprise switches may carry a premium. Generic or third-party modules are usually more affordable.

Typical Use Cases

- Data Centers and Enterprise Networks:** 1310nm modules are widely used for short-to-medium links (≤ 10 km) due to their cost efficiency.
- Metro and Campus Networks:** Extended-range modules (20–40 km) are suitable for longer single-mode fiber connections.

Fast Ethernet or SDH/SONET Applications: Lower-speed 155 Mbps 1310nm SFP modules are available at very affordable prices, often under \$50.

Summary

For budgeting purposes, you can expect:

- 1G–10G, 10 km: \$20–\$80
- 10G, 20–40 km: \$80–\$150
- Specialized DFB lasers or industrial-grade modules: \$100–\$200

Always check the module specifications, compatibility with your network equipment, and whether the module is OEM or third-party, as these factors significantly influence the final cost.
