

Procurement of Fiberglass Ladder Cable Trays

AI Overview

Fiberglass ladder cable trays (FRP/GRP) are lightweight, corrosion-resistant systems ideal for industrial and harsh environments, available from multiple suppliers with customizable configurations.

Overview Fiberglass ladder cable trays are made from fiberglass reinforced plastic (FRP/GRP) combined with resin and surfacing mats, forming a strong, durable, and corrosion-resistant composite material suitable for electrical and instrumentation installations. They are designed to support insulated power and communication cables while withstanding harsh conditions such as chemical exposure, UV radiation, and extreme temperatures. Compared to steel, FRP trays are non-conductive, impact-resistant, and significantly lighter, offering a superior strength-to-weight ratio.

Applications These trays are widely used in: Offshore platforms and marine environments Chemical, petroleum, and metal refineries Water treatment plants and power industries Telecommunications and light industrial facilities They are suitable for both horizontal and vertical installations, and their ladder design allows easy cable placement and maintenance.

Specifications

- Structure:** Two longitudinal side rails with transverse rungs mechanically fixed and bonded
- Rung spacing:** Typically 150mm, 250mm, or 300mm apart
- End connections:** Pre-drilled holes for FRP connecting plates and hardware
- Resin systems:** Options include fire-retardant, UV-resistant, and chemical-resistant resins
- Compliance:** Manufactured to meet internationally accepted standards and project specifications

Procurement Options

Suppliers and Manufacturers:

- Creative Composites Group:** Offers Enduro FRP ladder trays for corrosive and demanding conditions, fully fabricated and tested for industrial safety.
- MIYA FRP:** Provides ladders with various resin systems and pallet configurations for offshore, chemical, and refinery applications.
- Unicomposite:** Supp...
