

The distribution box opening was too large

AI Overview

A distribution box being "too large" usually indicates that the email or recipient list exceeds size or recipient limits set in Exchange or Outlook. Understanding the Issue When sending emails to a large distribution group, you may encounter problems such as: Messages being blocked or failing to send due to size limits on the mailbox, distribution group, or server connectors. MailTips or warning indicators in Outlook showing a red cross or alert when the group exceeds a certain number of recipients, even if the email is delivered successfully. Dynamic distribution groups may fail if the recipient filter or attribute length is too long, which can happen when trying to include many users in a single group. Common Causes Message Size Limits: Exchange servers and mailboxes have maximum send and receive sizes. If your email, including attachments, exceeds these limits, it may not be delivered. Recipient Count Limits: Some servers limit the number of recipients per message. For example, messages from anonymous senders may only be accepted for the first 200 recipients at a time. Distribution Group Attributes: Dynamic groups use filters and attributes to define membership. If the filter string becomes too long, the group may not function correctly. Solutions Check and Adjust Size Limits: Use Exchange Management Shell commands to view and modify limits: `CodeCopyGet-DistributionGroup | Format-List Name,MaxReceiveSize,MaxSendSize` `Get-DistributionGroup -Identity "GroupName" | Set-DistributionGroup -MaxReceiveSize 500MB -MaxSendSize 500MB` This allows you to increase the maximum message size for the group. Split Large Groups: If a distribution group is too large, consider creating multiple smaller groups and sending emails to them separately or using a custom attribute to create a dynamic group. Adjust MailTips Threshold: In Outlook or Exchange Online, you can change the thre...
