

The lower edge of the fiber distribution box is at a distance from the ground

Overview

The bottom edge of the distribution box is usually between 1.8 meters above the ground, which is convenient for operation and inspection. The location should be in a dry, ventilated, and anti-corrosion place, and the height should be no less than 1. It is recommended to use a. The fiber distribution box—sometimes called a fiber box or internet distribution box—is the point where feeder cables from the central office connect with distribution cables going to individual users. What do we mean by the “installation process?”

” Assuming the design is completed, we're looking at the process of physically installing and completing the network, turning the design. The fiber termination box is an interface between the fiber cable from the line side and the pigtails to be passed to the fiber distribution frame. A fiber pigtail is a specific hardware connection used for cable termination.
