

The router s fiber optic WAN light remains on green

Overview

The Wide Area Network (WAN) light shows that your router is connected to the fiber terminal. Router status lights, often referred to as LED indicators, are small lights on the front panel of your router. Typically, these lights correspond to various router functions such as power. If the internet light on your TP-Link router is off, or the web interface shows "WAN Port Unplugged" or "Something Is Wrong with the Hardware Connection," this guide walks you through diagnosing and fixing the problem. Note: If other LEDs on your router are also malfunctioning, refer to What should. But tp-link router all led's stays solid green and connection can only be resume either after reboot or manually disconnect and reconnect from wan setting. I have pppoe connection and i switched connection mode to always on option. Please make. The LEDs on your modem, optical network terminal (ONT), router, or modem/router combo (gateway) are most likely blinking because they're communicating what the device is doing, or there's an error.
