

UAE Fireproof Reinforced Cable Tray Quotation

AI Overview

Fire-resistant cable trays in the UAE are available from multiple certified suppliers, with options including FRP, ladder, and perforated trays, compliant with ECAS and CE standards. Key Suppliers and Products:

- Unigroup** – Offers high-performance cable trays, including perforated, ladder, and GRP (Glass Reinforced Polyester) systems. Their trays are fire-resistant, corrosion-resistant, and manufactured in the UAE to international standards. They provide full accessory support and customized solutions for commercial, industrial, and utility applications.
- Ferrotech** – Specializes in FRP cable trays made from glass-armoured thermoset fire-retardant resins. These trays are anti-corrosive, UV-resistant, electrically insulating, and have low thermal conductivity, available in perforated and ladder types with complete fittings and accessories.
- Bonn Group** – Supplies galvanized steel, stainless steel, and aluminum cable trays with fire-resistant properties. Their systems include bends, junction boxes, and reducers, suitable for indoor and outdoor installations, and designed for industrial plants, data centers, and commercial buildings.
- West Port Cable Tray** – Provides a wide range of cable trays, ladders, trunking, and Unistrut channels engineered for heavy-duty applications. Their systems are modular, adaptable, and suitable for fire-resistant installations in commercial and industrial projects.

Certification and Compliance ECAS and CE Requirements: UAE projects often require ECAS certification in addition to CE marking. Fire-resistant cable trays must have test reports matching the installed assembly, and evidence should align with the required EI ratings (EI60, EI90, EI120).

Complete Scope of Supply: A compliant system includes the tray, accessories, and installation documentation. Ensure the RFQ specifies fire rating, material type, and certification requirements to avoid procurement delays.
