

What type of splitter should I use for an FTTR1 to 16-channel cable

Overview

PLC splitters are the preferred choice for modern FTTH networks. Is a higher split ratio always better?

No. For modern FTTH and Quick ODN networks, PLC splitters are preferred for consistency and scalability. Understanding Split Ratios (1:4, 1:8, 1:16, 1:32) □□ The split ratio determines how many subscribers share a single feeder fiber. Many buyers focus first on fiber cable, drop cable, or passive components. These products are important, but the splitter ratio directly affects network coverage, optical power budget, user. Whether you're deploying a Passive Optical Network (PON), connecting MDUs, or expanding fiber access in rural zones, the right splitter configuration can dramatically affect performance, layout simplicity, and project cost. In this guide, we'll break down what fiber splitters do, how they work, and. The optical splitter is a passive optical device that can split an optical signal into multiple optical signal outputs, including one or two input terminals and multiple output terminals. Essential component for FTTH (Fiber To The Home) and PON (Passive Optical.
