Overview

Bus bars: These are metal strips that conduct electricity within the power distribution box. They serve as the central connection point for all circuits. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. The. Bottom Line Up Front: Your home's distribution box (electrical panel) is typically located in the basement, garage, utility room, or mounted outside near your electrical meter. To find it quickly, look for a rectangular gray metal box about the size of a medicine cabinet, often positioned close to. It serves as the main incoming and outgoing word for the supply of current to be managed to any and all areas of the system as one core unit. It also serves as housing of some important devices such as; Breakers, Fuses, residual current devices (RCDs), and Bus bars which aid in the safe running of. A distribution box, or DB box, is a circuit breaker enclosure.
