

Which router should I buy for cold-connecting sub-ports

AI Overview

For cold-connecting multiple sub-ports, routers with multi-gigabit Ethernet ports like the TP-Link Archer BE900 or ASUS RT-BE96U are ideal. Recommended Routers

1. TP-Link Archer BE900 This WiFi 7 router is equipped with eight networking ports, including four 2.5Gbps, three 10Gbps (one SFP+), and one 1Gbps port, making it perfect for connecting multiple wired devices or sub-networks. It also supports high-speed wireless connections, but its extensive wired port options make it ideal for cold-connecting sub-ports. Additional features include two USB ports and EasyMesh compatibility for expanding your network.
2. ASUS RT-BE96U The ASUS RT-BE96U is a top-tier WiFi 7 router with multiple high-speed Ethernet ports and excellent range. It supports advanced traffic management, free security features, and mesh networking. Its robust wired connectivity ensures stable performance for multiple sub-ports, making it suitable for home or small office setups.
3. TP-Link Archer BE6500 For slightly smaller setups, the Archer BE6500 offers dual 2.5Gbps ports and can handle up to 90 devices simultaneously. While it has fewer ports than the BE900, it is still a strong choice for connecting several sub-ports with reliable performance.

Key Features to Consider

- Multi-Gigabit Ports:** Look for routers with 2.5Gbps, 10Gbps, or SFP+ ports to support high-speed wired connections.
- VLAN and QoS Support:** Useful for segmenting sub-networks and prioritizing traffic.
- Future-Proof Standards:** WiFi 6 or 7 ensures compatibility with modern devices and high throughput.
- Mesh Compatibility:** If you plan to expand your network, routers supporting EasyMesh or similar technologies allow seamless integration.

Conclusion For cold-connecting sub-ports, routers with multiple high-speed Ethernet ports are essential. The TP-Link Archer BE900 and ASUS RT-BE96U are the best options for extensive wired setups,...
